

MSCA MEET-UP Manifestation of Interest

Are you a post-doc or experienced researcher and would you like to expand your experience with a stay in a French research group? Are you ready for a new challenge and an international career? Do you want to broaden your network and mature as an independent researcher?

**The Marie Skłodowska-Curie individual fellowships
will be of interest to you.**

The European Union's competitive Marie Skłodowska Curie fellowships provide competitive salary, a mobility allowance, and research costs. Through one of them, you can join one of our labs for up to two years, and be part of a world-class academic community in the heart of Paris. Provided you work in one of our priority fields, you can apply to be part of the MSCA Meet up event in Paris on 11-12 June.

On 11 and 12 June 2018, we can invite you to visit your prospective host institution and lab, meet supervisors and benefit from training to write your Fellowship proposal for the European Commission.

The proposed project to the Marie Skłodowska Curie fellowship aims at developing a mucosal vaccine strategy based on the new property of IL-7 we identified (Beq et al. Blood 2009 and Ponte et al. Frontiers in Immunology 2017). This project will be performed in both murine and non-human primate models.

Contact Dr Rémi Cheynier (remi.cheynier@inserm.fr) before 8 February 2018.
