

### **Position: Graduate students (Masters and Ph.Ds)**

CR-CHUM / University of Montreal

I am currently looking for skilled and motivated graduate students to study oncolytic virotherapy for cancer treatment. Oncolytic viruses can specifically target and kill cancers and induce anti-tumor immunity. Our work focuses on the immune facet of the treatment and the development of personalized cancer vaccines.

The lab is brand new and the team of researchers from the cancer axis is amazing.

Send your CVs and cover letters directly to [mcbdaigneault@gmail.com](mailto:mcbdaigneault@gmail.com)
